So if you have a newer laptop or computer, it is highly probable that it runs on a 64-bit processor. Have an older computer, or just want to check which architecture is your laptop running on? Follow our quick guides for Windows and macOS below. If you have a computer with Windows operating system: 1. Click the Start icon in the bottom left corner of your screen and type "Control panel". Once the result will show, you will see "System" in the right column - clicking it will open a window with your computer's system information. 2. Look for the System type in the System section. If you have a computer with macOS: 1. Go to the Apple Menu and select "About this Mac". 2. Look below the operating system version and computer model name - you will see your processor name. If the name says Intel Core Solo or Intel Core Duo, it's 32-bit only. Otherwise, the architecture of your computer is 64-bit.
